

To save a pdf you've opened, click on the disk icon (red arrow) in the upper right corner of your browser. A file window will open and you'll be able to assign a destination folder on your computer along with a file name. To print the PDF, click on the printer icon (blue arrow) and select your printer.

To download and save a photo

Many websites use an optimization program when downloading photo images as a way speeding up the process. Unfortunately, this may make it difficult to open the photo in the format it was downloaded. To work around this problem, click on the photo you want. You'll see a "downloads" prompt in the corner of your screen. Do not click "Save" or "Save as". Instead click open. A resident program on your computer should open up to display the photo. From this program, you can save the photo in a workable format.
